 Functions of One Complex Variable - Calvin College - kind of representations for various complex mappings $w = f(z)$. Multiple-valued functions corresponding to each value of z there is more than one value of w , then the complex function $w = f(z)$ is called a multiple-valued function of z . For example, the square root function $w = f(z) = \sqrt{z}$ is a multiple-valued function and two values of w exist for each value of z . Thu, 15 Mar 2018 22:36:00 GMT
 Chapter 2 Functions of a Complex Variable - those functions f which can be represented locally as such a power series.³ As we will see below, one characteristic property of such functions is analyticity. Definition 1.2.1. Let $D \subseteq \mathbb{C}$, C be open, $f: D \rightarrow \mathbb{C}$, $z = x + iy$, $f = u + iv$. a) f is complex differentiable in a $z \in D$ if $\lim_{z \rightarrow a} \frac{f(z) - f(a)}{z - a}$ exists for each sequence z in $D \setminus \{a\}$ converging to a .  1 Complex Numbers and Functions - RIT Center for Imaging ... - calculus for complex valued functions of a complex variable. We define the notion of complex differentiability. Given an open set $U \subseteq \mathbb{C}$, we say a function $f: U \rightarrow \mathbb{C}$ is holomorphic on U provided it is complex differentiable, with derivative $f'(z)$, and f' is continuous on U . Writing $f(z) = u(z) + iv(z)$, we discuss the Cauchy-Riemann equations for u and v . Fri, 16 Mar 2018 11:21:00 GMT
