Examinations of the Head and
Neck - BACKGROUND AND
PURPOSE: Head and neck
squamous cell carcinoma
associated with human
papillomavirus infection
represents a distinct tumor entity.
We hypothesized that diffusion
phenotypes based on the
histogram analysis of ADC
values reflect distinct degrees of
tumor heterogeneity in human
papillomavirusâ€“positive and
papillomavirusâ€“negative head
and neck squamous cell
carcinomas. Wed, 23 Mar 2016

on MR safe practices: 2013 -
Computed tomography
(CT) scanning of the head
scanning uses a series of x-rays of
the head taken from many
different directions. Typically
used for quickly viewing brain
injuries, CT scanning uses a
computer program that performs
a numerical integral calculation
(the inverse Radon transform) on
the measured x-ray series to
estimate how much of an x-ray
beam is absorbed in a small
volume of the ... Thu, 15 Mar
